

Press Release

## **Geneva Acquires MCBA, Inc. of Huntsville Alabama**

12/27/2013 – Greensboro, NC. Geneva Software Company, Inc. today announced it has acquired MCBA, Inc. of Huntsville, Alabama. Geneva now owns the Quantum Suite of Software modules and has also acquired existing MCBA customers to support throughout seven countries. Geneva will retain MCBA's existing Customer Support Staff so the transitioned customers will continue to work with people who are familiar to them.

The acquisition enables Geneva to better control the development of the next generation of Quantum Software to operate in a purely "Windows" environment. In the past, MCBA has been tethered by the requirements of the Unix operating system but now, through this acquisition, Geneva will be able to increase screen sizes, rework the fonts and colors and give Quantum customers a better user experience.

"We have done very well as a Reseller of the Quantum Software through the years. Now, as the owners of Quantum, we are better positioned to invest in new development works and add even more features, as our customer's needs expand" said Tom Vincent, President of Geneva. Mr. Vincent continues "It is also our mission to continue supporting the existing MCBA Quantum customers and make available to them more features that include native windows printing, drill downs, scanning documents and email notification capabilities. These customers will continue to work with the same customer support reps they have depended on through the years. There will also be more web based solutions made available to this existing group of customers. These solutions include Geneva's web based remote requisitions, web based Financial Reporting system, and interfaces with various third party web based timesheet systems and employee web portals."

About Geneva

[www.genevasoftware.com](http://www.genevasoftware.com)

Geneva started operations as a Value Added Reseller for MCBA in 1990. The company began by supporting MCBA customers using the Accounting, Distribution and Manufacturing modules. Today Geneva supports Quantum users throughout the United States, primarily in the non-profit Accounting and Finance markets. Geneva has been very active in adding features to Quantum that make it easy to use, interface with other systems and addresses the needs of the customer base. The focus is on work flow throughout each organization and how bringing technology to those areas helps our customers to achieve a maximum return on their investment in software and technology.

About MCBA

MCBA was the company that created the MCBA Classic software back in the 1974 running on Wang, DEC and HP Mini-Computers. MCBA developed a network of Resellers around the globe that customized and tailored the software for their specific vertical markets, Geneva being one of them. The Classic version of the software evolved into the Quantum suite of modules and is widely used by small, medium and large corporations throughout the world.
